Turbo cijev

Filtri aspirazione  
Usisni filter

Štitnik kardana

The PUMP SAVER®, an accessory for showing membrane breakage and oil loss, provides remote monitoring of the "out-of-range" oil level variations within the pump, and thus signals membrane breakage. Whenever there is a fluctuation in oil level, the PUMP SAVER® kit, integrated with the SIGNAL BOX kit, alerts the operator if a fault is detected in the pump with the illumination of a warning light. The device is easy to use. Simply replace the cap fitted as standard with the PUMP SAVER® kit, connect it to the SIGNAL BOX kit in the cab, make the electrical connection using the handy cigarette lighter attachment, and it is already operational.

PUMP SAVER® je pribor koji pruža pokazivanje loma membrane i gubitka ulja kroz daljinski nadzor varijacijom ulja unutar pumpe a samim time i puknuće membrane. Kad god postoji fluktacija u razini ulja PUMP SAVER® komplet, integriran sa kompletom SIGNAL BOX, obavještava operatera ako je pogreška otkrivena u pumpi s paljenjem svjetla upozorenja. Uređaj je jednostavan za korištenje. Jednostavno zamijenite poklopac opremljen kao standard s PUMP SAVER® kompletom spojite ga na kit SIGNAL BOX u kabini te utaknite u električni priključak za paljenje cigareta i to je sva operacija.
